

May 7, 2009

MAGTEC has long stood for innovation, security, and quality within the transportation security business. As the industry continues to evolve and new products introduced, it becomes more difficult for even the most well informed consumer to separate the facts from the hype.

Look for a track record

It's easy to make big news by making big claims, but consumers need to exercise caution.

Robert Morisset, president & CEO of MAGTEC Products, Inc. says, "There are a number of companies in this space making a lot of claims. Ground transportation security and vehicle control has been MAGTEC's core business for many years. Our capabilities are supported by studies, research and documented proof that we do what we say, and we do it well. MAGTEC continues to be the most secured technology available."

The company's highly encrypted and extremely secure vehicle disabling technology has been well studied and tested. One of several successful studies was the U.S. Department of Transportation (DOT) and Federal Motor Carrier Safety Administration's (FMCSA) [Best Practices for Industry and Law Enforcement](#) report in November 2007, in which MAGTEC was the leading technology.

"Our ongoing position as the leader in vehicle security, including control and shutdown methods, demonstrates that our proprietary systems are vastly more secure and difficult to beat than common CAN bus or software solutions" states Morisset. "We maintain our focus on pure security – encryption, authentication, secure communication, remote control, and vehicle security intelligence – and continue to make honest and supported claims to that effect. Our technology is backed by a wide customer base that has travelled hundreds of millions of miles, a claim other companies can't make."

Morisset adds, "We have recently completed another very successful initiative with DHS/TSA. The final report, due to be released by the end of May, will further support qualified technology for a number of federally funded security initiatives."
